

SELECTING CORIAN® COLOURS FOR YOUR APPLICATION

In order to ensure that you gain the greatest satisfaction from your Corian® and that it meets your expectations, please read the following statement carefully.

Dark colours and heavily pigmented solid colours will show scratches, dust, ordinary wear and tear, more easily than the light, textured, colours. We therefore advise against using these colours for domestic or commercial kitchen/laboratory work-surfaces.

Whilst the composition is the same as all other Corian® colours, the pigmentation is of a higher density to produce these solid and vibrant colours. Heavily pigmented and solid vibrant colours will require more frequent care to maintain their appearance.

**The Colour chart provided is for guidance only,
we are happy to provide actual Corian® samples for colour matching.
Samples of Corian® may also vary from installed Corian®**

The following series of colours have veining which can vary with intensity and may highlight joints, for larger samples please call the free phone number :
